

## Debate Competition: Solar Energy Ban or Boon

30<sup>th</sup> September 2023

### Objective

To playfully create awareness among students about benefits and potential threats associated with Solar Energy.

### Description

If we notice our surroundings, all of our recent environment is found full of electric equipment, be it fans, Air conditioners, tubelights, bulbs, kitchen appliances, to run these today's life necessities, we require electricity and to fulfil that requirement, we have multiple sources to generate electricity and in India, we are dependent upon thermal energy which is depleting our Coal reserves which are limited and hence non sustainable hence to move towards an eco friendly approach, we are shifting towards are most native universal source of energy i.e., Solar Energy, solar energy is a potentially beneficial sources, if we consider today's scenario of nurturing the nature and protecting our ecosystem, our government is supporting the utilization solar energy in terms of subsidy etc. However on otherside the battery and the remnants associated with operations are costly and potentially detrimental to the environment. To create the same insight in our young minds, Banarsidas Chandiwala Institute of Physiotherapy, New Delhi, organised the interbatch debate competition to make them think and implement!

The students enthusiastically participated in the event with their sudden shear deliveries of facts. Both the teams scored equally at the end, winners were awarded with certificates of appreciation and gifts.
